MONTHLY STRATEGY:

ACCUMULATE IN STAGGERED LEVELS.

Since 7<sup>th</sup> June, 2010 the USDIX is under performing, made high @ \$88.70 level. In last month after completion of YoY. dates price has started trading on sideways move. Developed trading range between 76.42 and 73.51 levels called as rectangular formation. It is a kind of accumulation phase that needed verification with volumes to meet price & volume convention for future price on break-out at one horizontal line of the range. The downward risk seems least @70.34 level reasoned due to extreme oversold condition and recently traded around monthly pivot point @74.67 level translates \$ index has potential to move-up in coming weeks and in months. The evidence charts also focus consolidation intact. Thus accumulate index in staggered form.
